## Icy Oceans

Large parts of the Arctic Ocean and Southern Ocean have ice on them in winter. There are also big icebergs. In summer, a lot of the ice melts. Then there are little pieces of ice in the oceans, and the icebergs are smaller.

Polar bears live in the Arctic. Most of the year, they live on ice. They catch seals from holes in the ice. They also swim between the ice and icebergs. Polar bears are the biggest type of bear, but their cubs are very, very small when they are born.

A Polar Bear With Cubs

In summer, the Southern Ocean has a lot of plankton. Many dolphins, whales, seals, and birds come there to feed.

Penguins live near the South Pole. They dive into the ocean for fish and other small animals. They have special feathers that keep them warm and dry. Their feathers are so warm that penguins can sometimes get too hot!

Penguins Diving

A penguin keeps its egg on its feet so it doesn't get cold on the ice.
